

Coping photo onto a CD using My Pictures

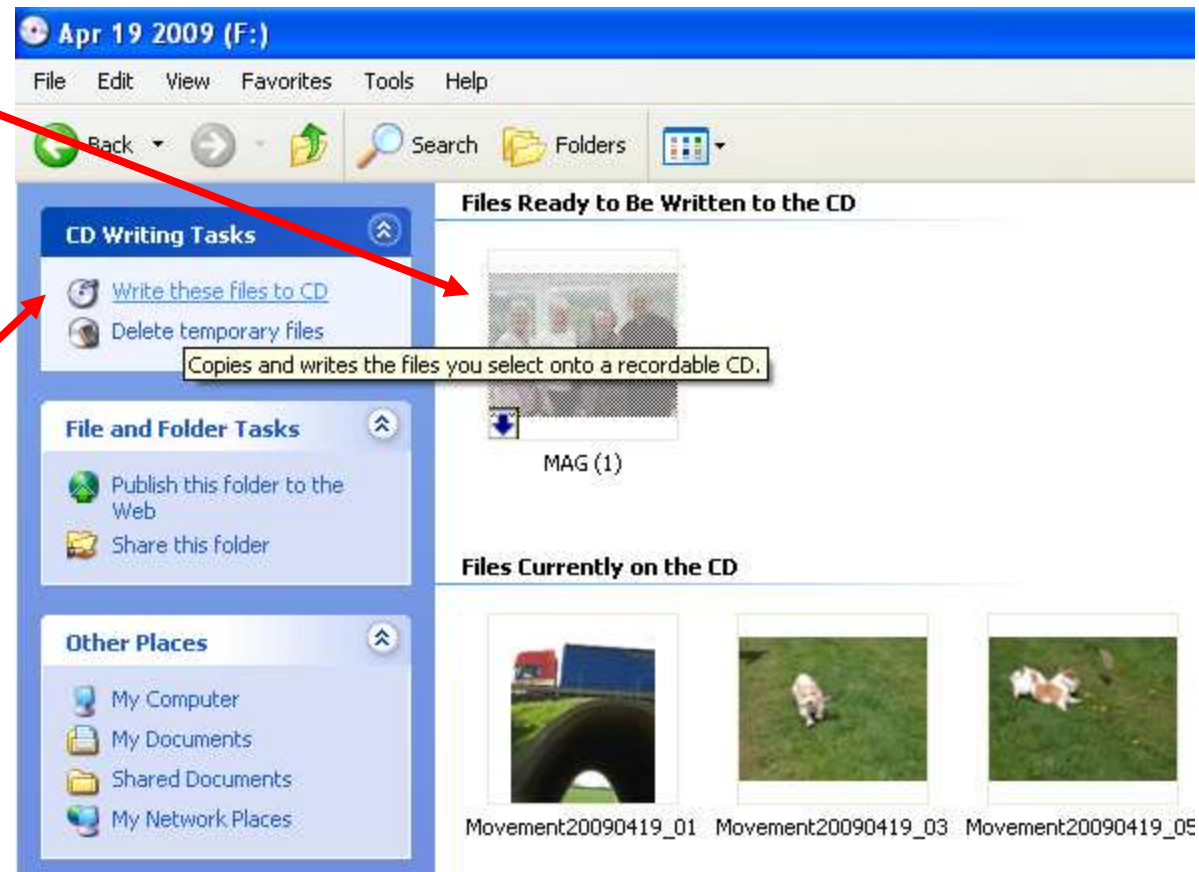

Select Photo

Click Copy to
CD

Go to drive which contains your CD

Check file you want transferred appears in upper section

Click on Write these files to CD

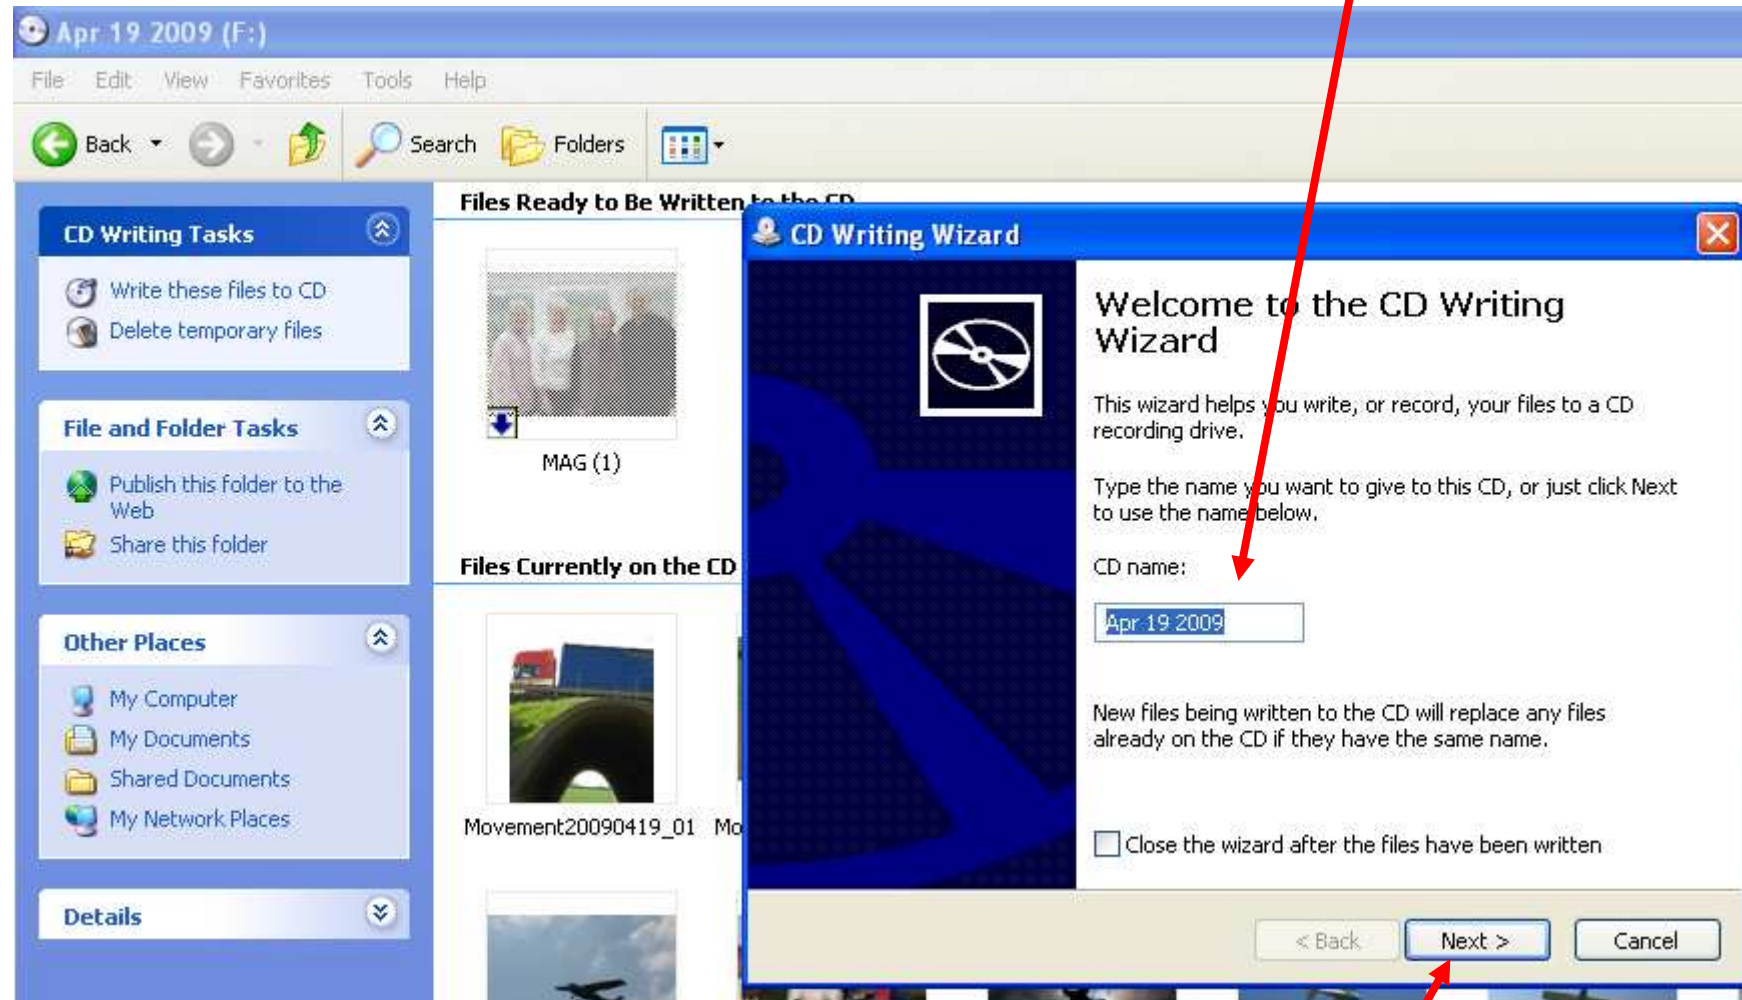

Which CDs to use

Option 1 Best to have already sorted out all the photos you want transferred to your CD. If so, use a CD-R or CD+R type CD, then finalise.

Option 2 If you only want to use the CD as a temporary storage, use CDR which is re-writable until once finalised.

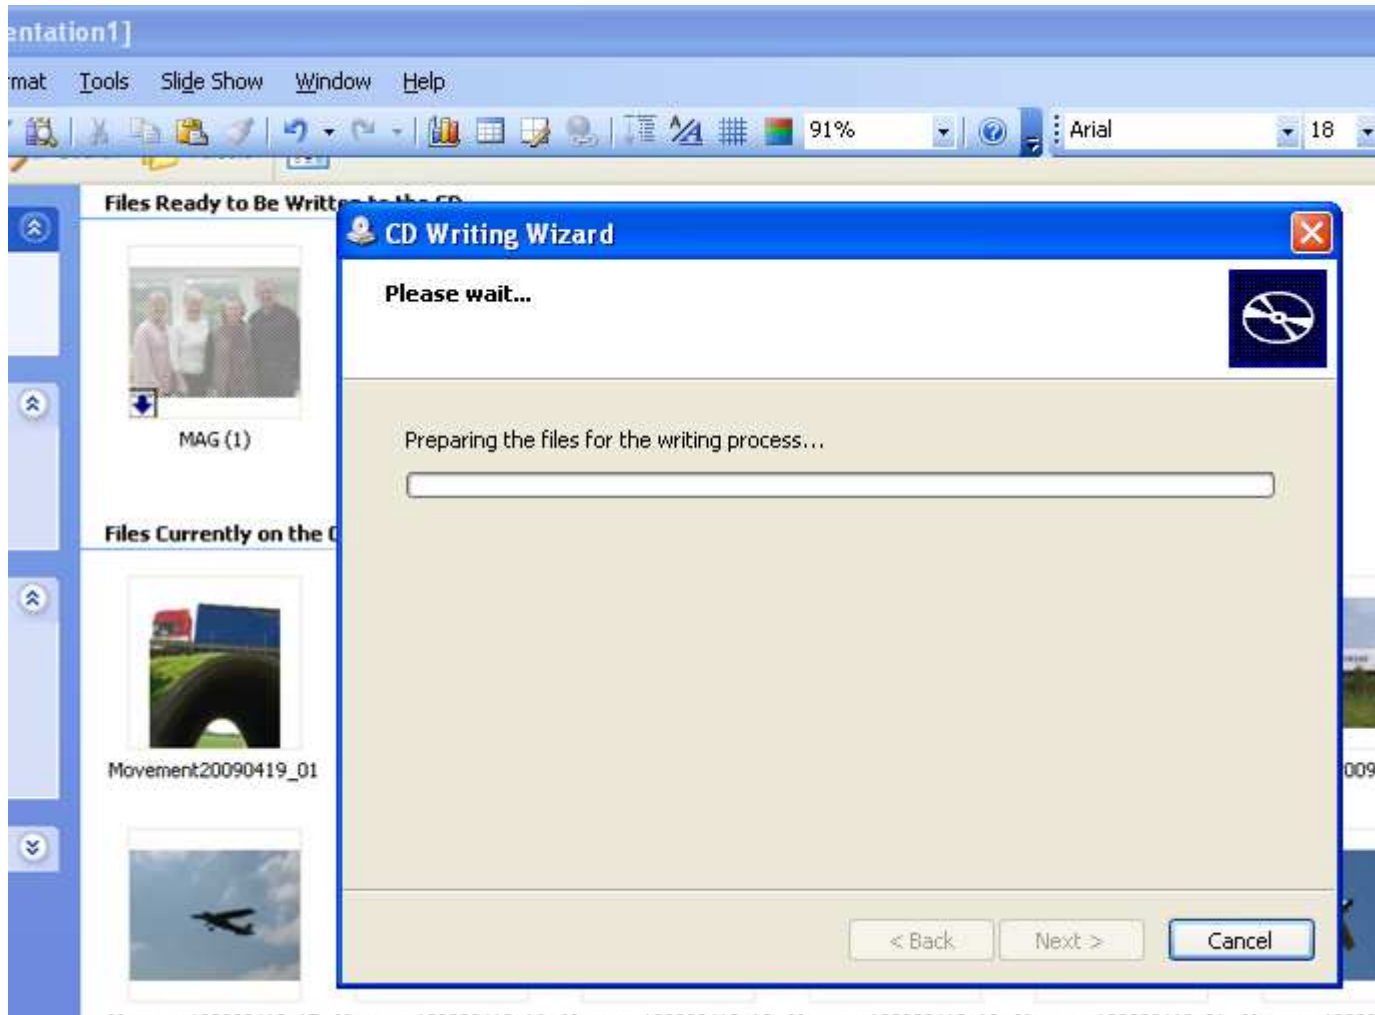

The best option to use is option 1.

Check CD name is correct

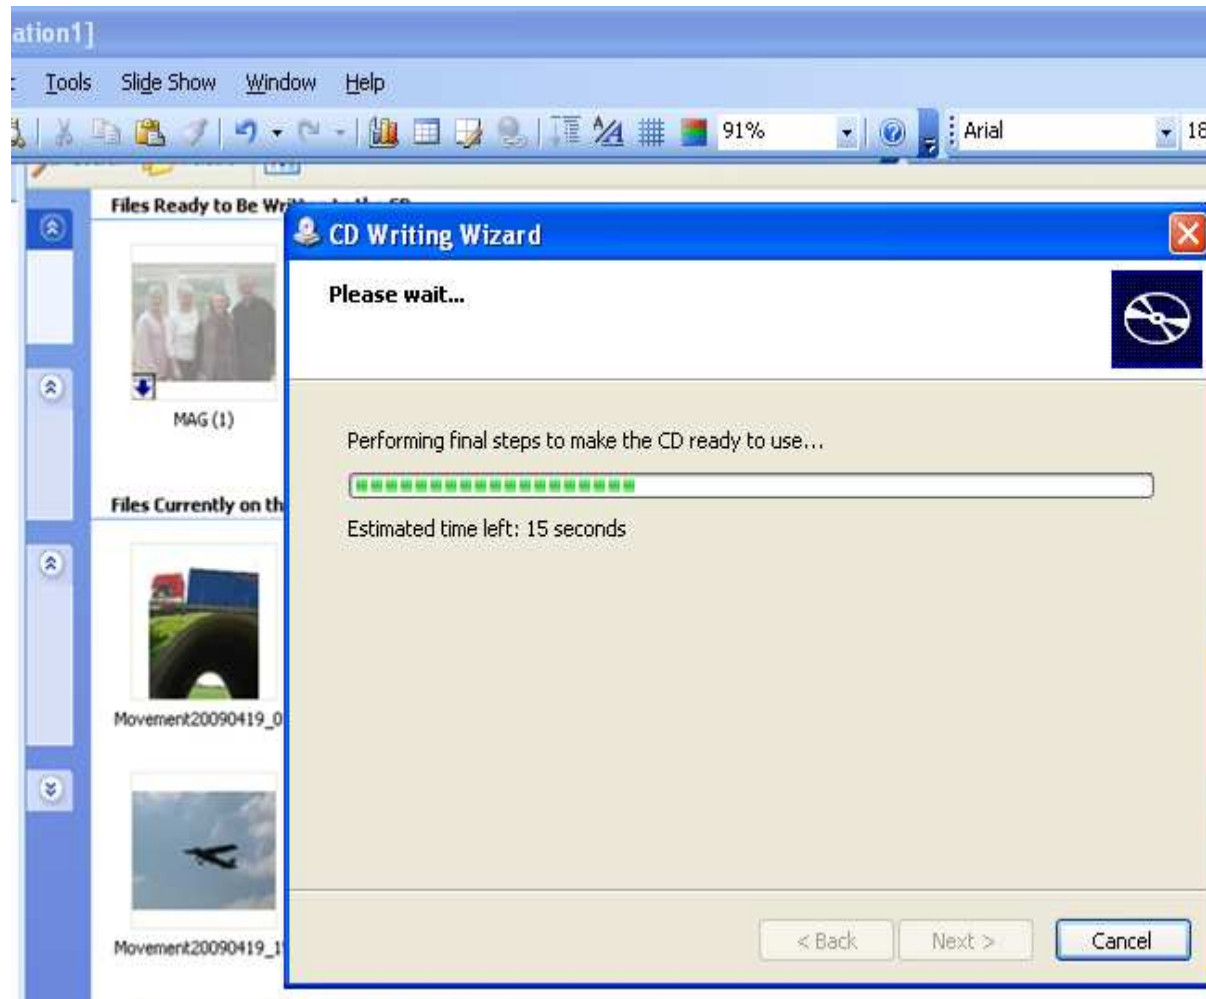

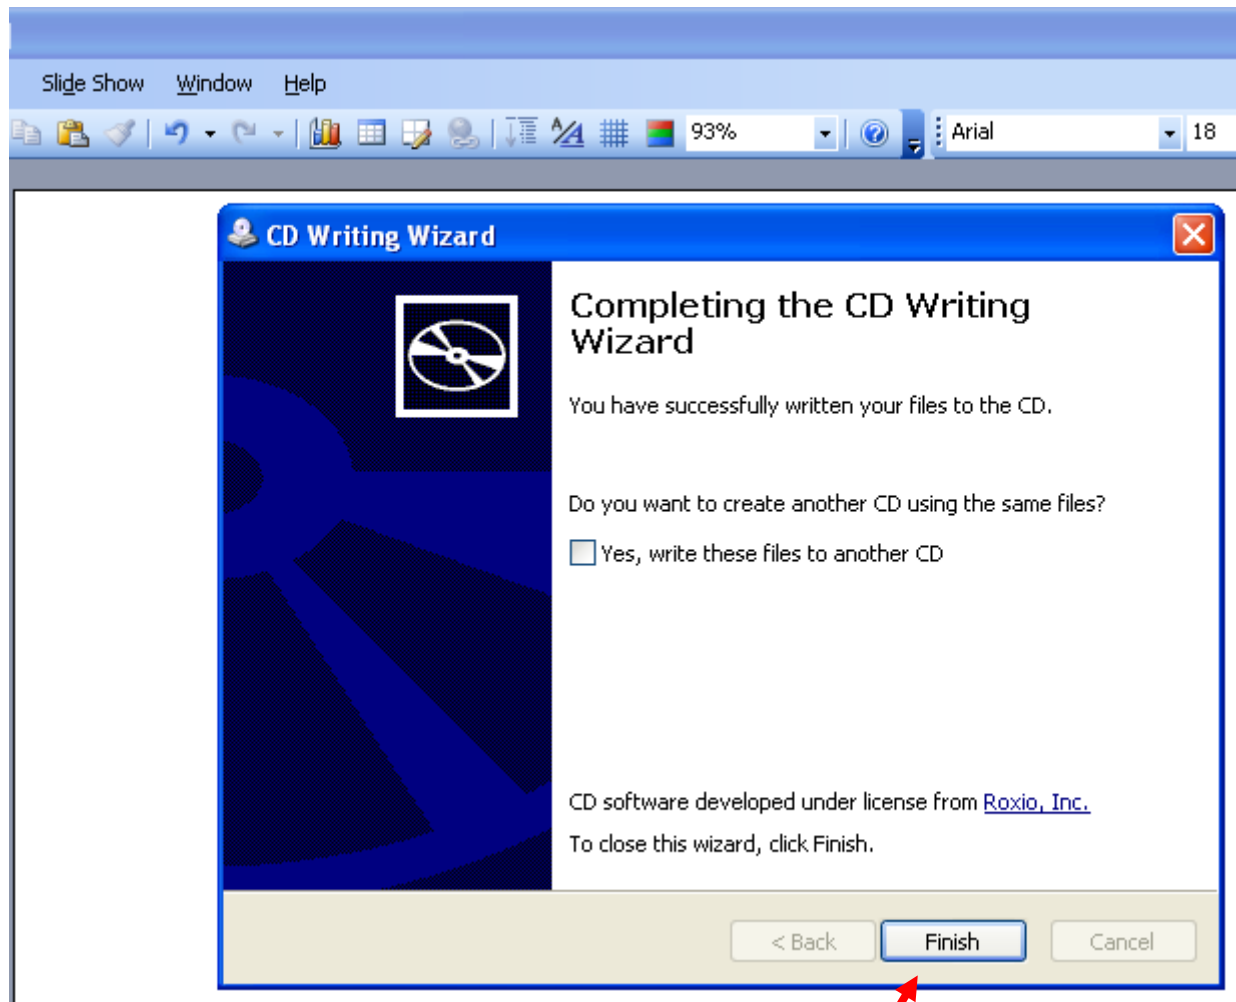

Click next

Pop up box appears showing progress

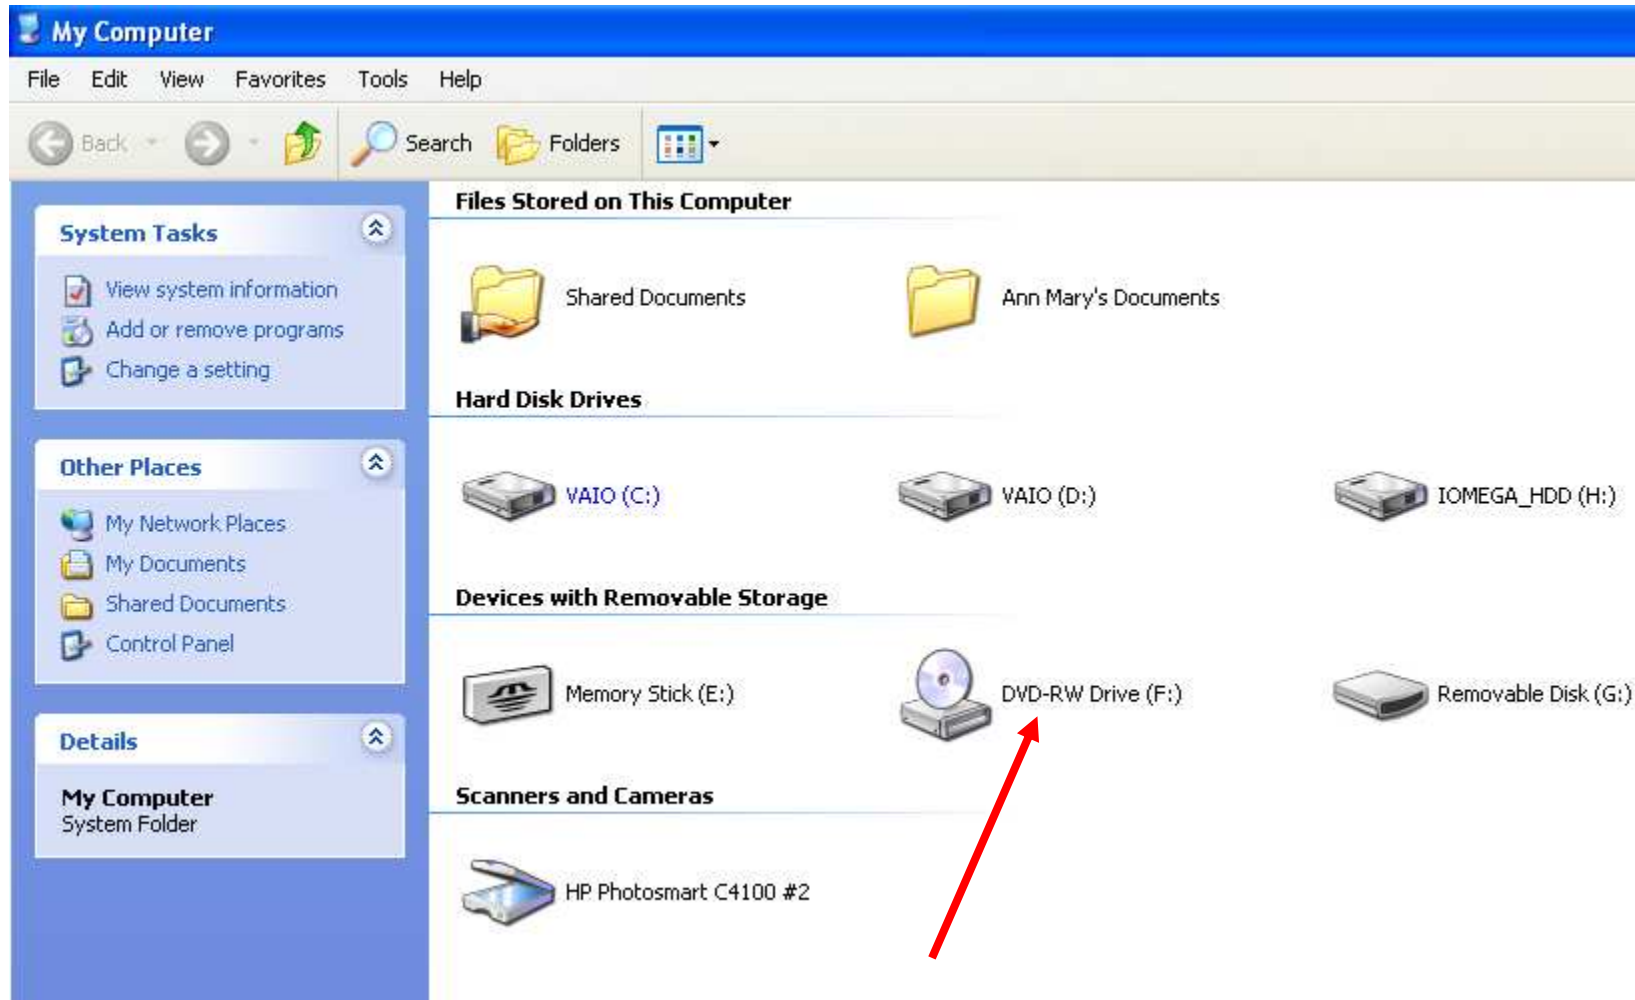

Pop up box appears showing progress

Click finish

Go to *My Computer* on desktop to locate drive CD is in

Click on relevant drive

Check photo has been successfully transferred
